The cause of half of the water pollution in our drainage pipes is our bad use of the drainage system

1. Let's use a net cover over the drain to catch the garbage and waste material after cooking.
2. Recycle as much cooking oil as you can. In case you have left over oil, solidify the oil or use newspapers to soak it up, instead of letting the oil and waste go into the drainage pipes.
3. Don't use too much detergent for washing . Study the directions for the detergent so that you can use the correct amount each time.

Giving

I will give you a used bicycle. It is red, 20 inches and 10years old. Please take it by yourself.
